SUMMARY

Java backend engineer with 4 years 9 months of experience building and releasing Spring Boot microservices, REST APIs and backend integration services for an enterprise Governance, Risk & Compliance platform in a regulated domain. Strong in Core Java, Collections and multithreading, and in SQL: MySQL stored procedures, MS SQL and PostgreSQL, schema design and query optimization. Experienced in resolving production defects and priority hotfixes alongside QA and architects, secure authentication (JWT, RBAC, MFA), event-driven design with Kafka and Redis, and the full SDLC with CI/CD in Agile teams.

TECHNICAL SKILLS

Languages: Java 8/17/21, Core Java, OOPs, Collections, Multithreading, Concurrency, SQL

Backend & Architecture: Spring Boot, Spring MVC, Spring Data JPA, Java EE (J2EE), RESTful APIs, Microservices, Backend Integration Services, Event-Driven Architecture, Distributed Systems, Low-Level Design

Databases: MySQL (stored procedures, schema design, query optimization), MS SQL, PostgreSQL, MongoDB (working knowledge)

Security: Spring Security, JWT, RBAC, MFA

Messaging & Caching: Apache Kafka (producers, consumers, topic partitioning), RabbitMQ, Redis

Cloud & DevOps: AWS (EC2, S3), Docker, Kubernetes, Jenkins, CI/CD pipelines

Testing & Tools: JUnit, Mockito, Git, Maven, Jira, Postman

Frontend: React.js, Next.js, JavaScript

EXPERIENCE

Senior Software Developer – Amigosec Consulting Private Limited (SynRadar) Feb 2022 – Present

Mumbai, Maharashtra (Remote)

SynVM – Vulnerability Management Module (Java, Spring Boot, Microservices, MySQL)

- Design, develop and maintain REST APIs, microservices and backend integration services for the vulnerability management module, from low-level design through release.
- Built Qualys and Tenable.sc integrations with normalization logic that maps differing scanner data formats into a single internal model; added scheduled jobs per integration, replacing manual imports and keeping vulnerability data current.
- Built a Jira integration to manage Jira issues directly from SynVM, plus vulnerability dashboards and tracking pages for live reporting and visibility.

SynSCM – Security Compliance Module (Java, Spring Boot, React.js)

- Build and maintain backend REST APIs and microservices for the security compliance module.
- Built React dashboards giving real-time visibility into compliance audits such as ISO 27001 and SEBI CSCRF.

Platform Security, Database, Production Support and Delivery (cross-module)

- Implemented secure authentication and authorization: JWT, role-based access control (RBAC) and a custom MFA flow with cache-tracked failed attempts, a configurable threshold and automatic account lockout.
- Optimized MySQL/MS SQL schemas and authored stored procedures for complex business logic; wrote low-level design documents from business and non-functional requirements.
- Resolve production defects and priority hotfixes, working with QA and architects; ship weekly patch releases and feature releases through Docker/Kubernetes-based deployments with Jenkins and AWS CI/CD.
- Review peers' code for readability, testing, security and performance in Agile sprints.

PROJECTS

RateShield – Distributed API Gateway with Rate Limiting GitHub

Java 17, Spring Boot, Spring Security, JWT, Redis, Apache Kafka, Docker

- Built a Spring Boot gateway that authenticates requests via JWT and enforces per-client, tiered (FREE / STANDARD / PREMIUM) rate limits, returning X-RateLimit-* and Retry-After headers.
- Implemented a Redis sliding-window limiter using an atomic Lua script (ZADD / ZREMRANGEBYSCORE / ZCARD) so limits stay correct across concurrent gateway instances.
- Published every allow/block decision as a Kafka event on a 3-partition topic keyed by client ID to preserve per-client ordering; built a consumer and live dashboard; containerized with Docker Compose.

CERTIFICATION

- Advanced Certification in GenAI and Multi-Agent Systems – Coding Ninjas (in progress); completed Prompt Engineering and API Integration module.

EDUCATION

Bachelor of Engineering, Computer Science & Engineering – Visvesvaraya Technological University (VTU), Belagavi Jul 2017 – Oct 2020
